

CANCER IMMUNOTHERAPY: Using Viruses to Treat Cancers

Speaker | Dr. Shashi Gujar

Department of Pathology
Department of Microbiology & Immunology
Dalhousie University

Quality & System Performance
IWK Health Centre

NSIS Free Public
Lecture

April 3, 2017
7:30 PM

Museum of Natural History
Auditorium
1747 Summer St., Halifax NS

When we think about viruses, we usually think about infections and diseases. However, not all viruses are harmful. We now know that some of these viruses can kill cancers, and most importantly, awaken our own immune system to fight cancers. These virus-based cancer therapies represent one of the most promising cancer treatment options.

So, how does it really work?

Dr. Gujar's research program studies this phenomenon. Using this platform, he will explain how viruses are being used in clinics to treat cancers, and elucidate how these therapies could promote long-term cancer-free health.
